Executive Summary or Forward

The Madison Soil and Water Conservation District is one of 50 Conservation Districts in Idaho. Idaho Soil and Water Conservation Districts are political subdivisions of state government but are not state agencies. Conservation Districts are charged with carrying out a program for the conservation, use and development of soil, water, and other natural resources.

Conservation Districts are the primary entities to provide assistance to private landowners and land users in the conservation, sustainment, improvement and enhancement of Idaho's natural resources. They are catalysts for coordinating and implementing conservation programs, channeling expertise from all levels of government into action at the local level. Programs are nonregulatory; science-based technical assistance, incentive-based financial programs and informational and educational programs at the local level.

Both by legislation and by agreement the USDA Natural Resources Conservation Service provides technical assistance to landowners and land users through Conservation Districts. Each Conservation District in Idaho has a signed Mutual Agreement with the Secretary of Agricultural and the Governor of Idaho that establishes a framework for cooperation.

The District's Annual Plan and Five-Year Resource Conservation Business Plan were developed not only to guide the Conservation District, but also to encourage cooperation among landowners, government agencies, private organizations, and elected officials. Through knowledge and cooperation, all concerned can ensure a sustainable natural resource base for present and future generations in the Madison Soil and Water Conservation District.

This document identifies the resource needs in the Conservation District and presents a resource conservation action plan for meeting these needs.

Mission of the Madison Soil and Water Conservation District

To take available Technical, Financial and Educational resources, whatever their source, and focus or coordinate them so that they meet the needs of the local land user for conservation of Soil, Water and related resources. Also, to protect and improve the natural resources in Madison County for landowners to use for generations to come.

Vision of the Madison Soil and Water Conservation District

The vision of the district is to provide landowners and users with a legal mechanism whereby they might cooperate with one another and with state, local and federal agencies in establishing sound soil and water conservation measures within the district. Also, to encourage each landowner to put all land and water resources to the most beneficial use and to treat each acre in accordance with its needs for protection and improvement.

Values of the Madison Soil and Water Conservation District

- ✚ Sustainable use of natural resources.
- ✚ Support for agriculture activity that uses sustainable, economic feasible practices.
- ✚ Value and respect for the Idaho Conservation Partnership.
- ✚ Conservation education for adults and youth.

Madison SWCD History

After the Madison Soil and Water Conservation District was organized February 2, 1948, farmers came to the SWCD primarily for help to modernize their irrigation systems, level land, and control the spread of noxious weeds. Ranchers sought assistance in improving the quality and quantity of forage for their cattle.

The SWCD includes all of Madison County in eastern Idaho. The first supervisors of the Madison SWCD were Wilford L. Jensen and Ed S. Covington, Rexburg; Clendon Gee, Sugar City; James H. Steel, Plano; and Glenn Sharp, Archer.

Agriculture remains the backbone of Madison County's economy. The amount of irrigated cropland has increased from 57,600 acres in 1948 to 112,525 acres in 1980, as farmers have steadily brought dry farmland under sprinkler irrigation. Potatoes, wheat, barley, and alfalfa hay are the major crops produced on irrigated land. Sugar beets, once a major crop in Madison County, have declined in importance but are making a gradual comeback.

Some of the conservation problems found on irrigated land when the SWCD formed are still problems today. Over-irrigation leads to erosion on much of the surface and sub-irrigated cropland. Irrigation systems that grew up with the farms need reorganizing for better water management. The SWCD encourages farmers to apply water according to crop needs and the soil's water-holding capacity. Leaving crop residues on the soil surface and using conservation tillage, along with soil-building crop rotations, will reduce erosion and improve yields on these lands.

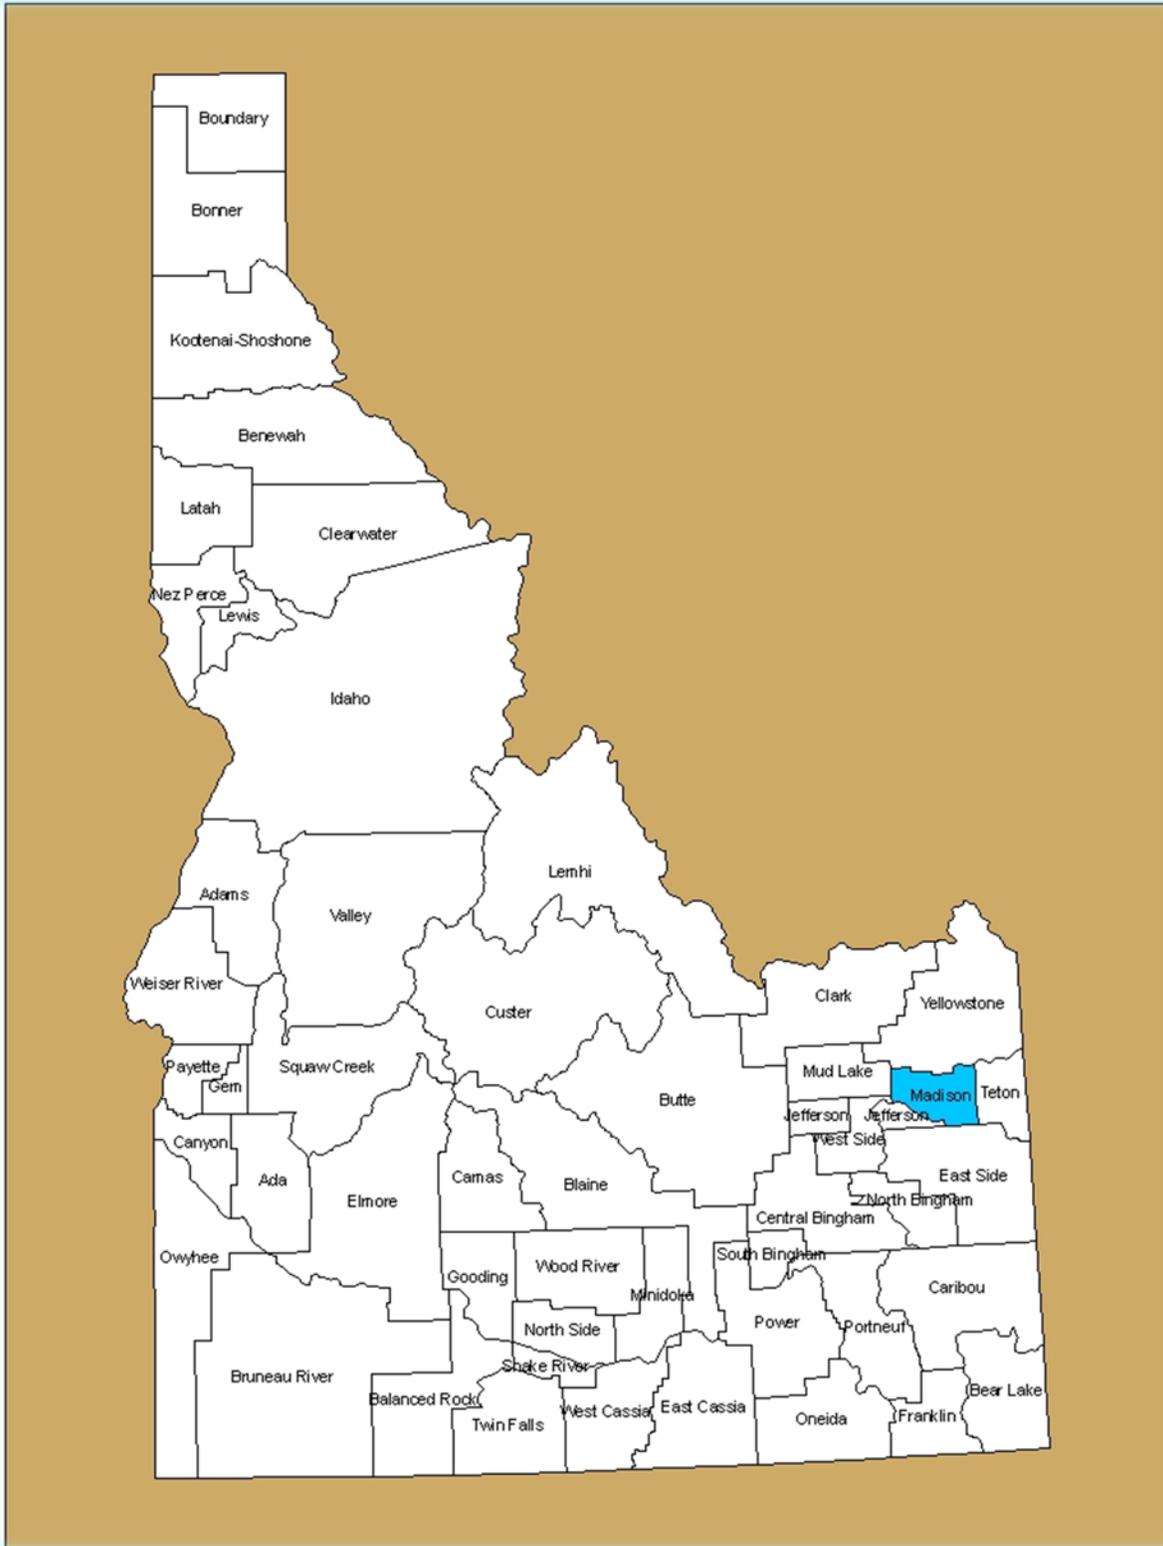

Wheat and barley are the main crops raised on the approximately 100,000 acres of dry land farms in the SWCD. Slopes ranging to 20 percent allow early spring runoff to cause considerable erosion. The number and size of gullies on dry land farms is increasing each year, while soil fertility is declining. Wind erosion is also a common problem on dry land farms.

Dry land conservation practices have changed since the Madison SWCD was formed. Farmers have gradually replaced strip cropping on dry land farms with terraces and debris basins. The SWCD promotes these dry land conservation practices as well as stubble mulching, chiseling, and sub soiling.

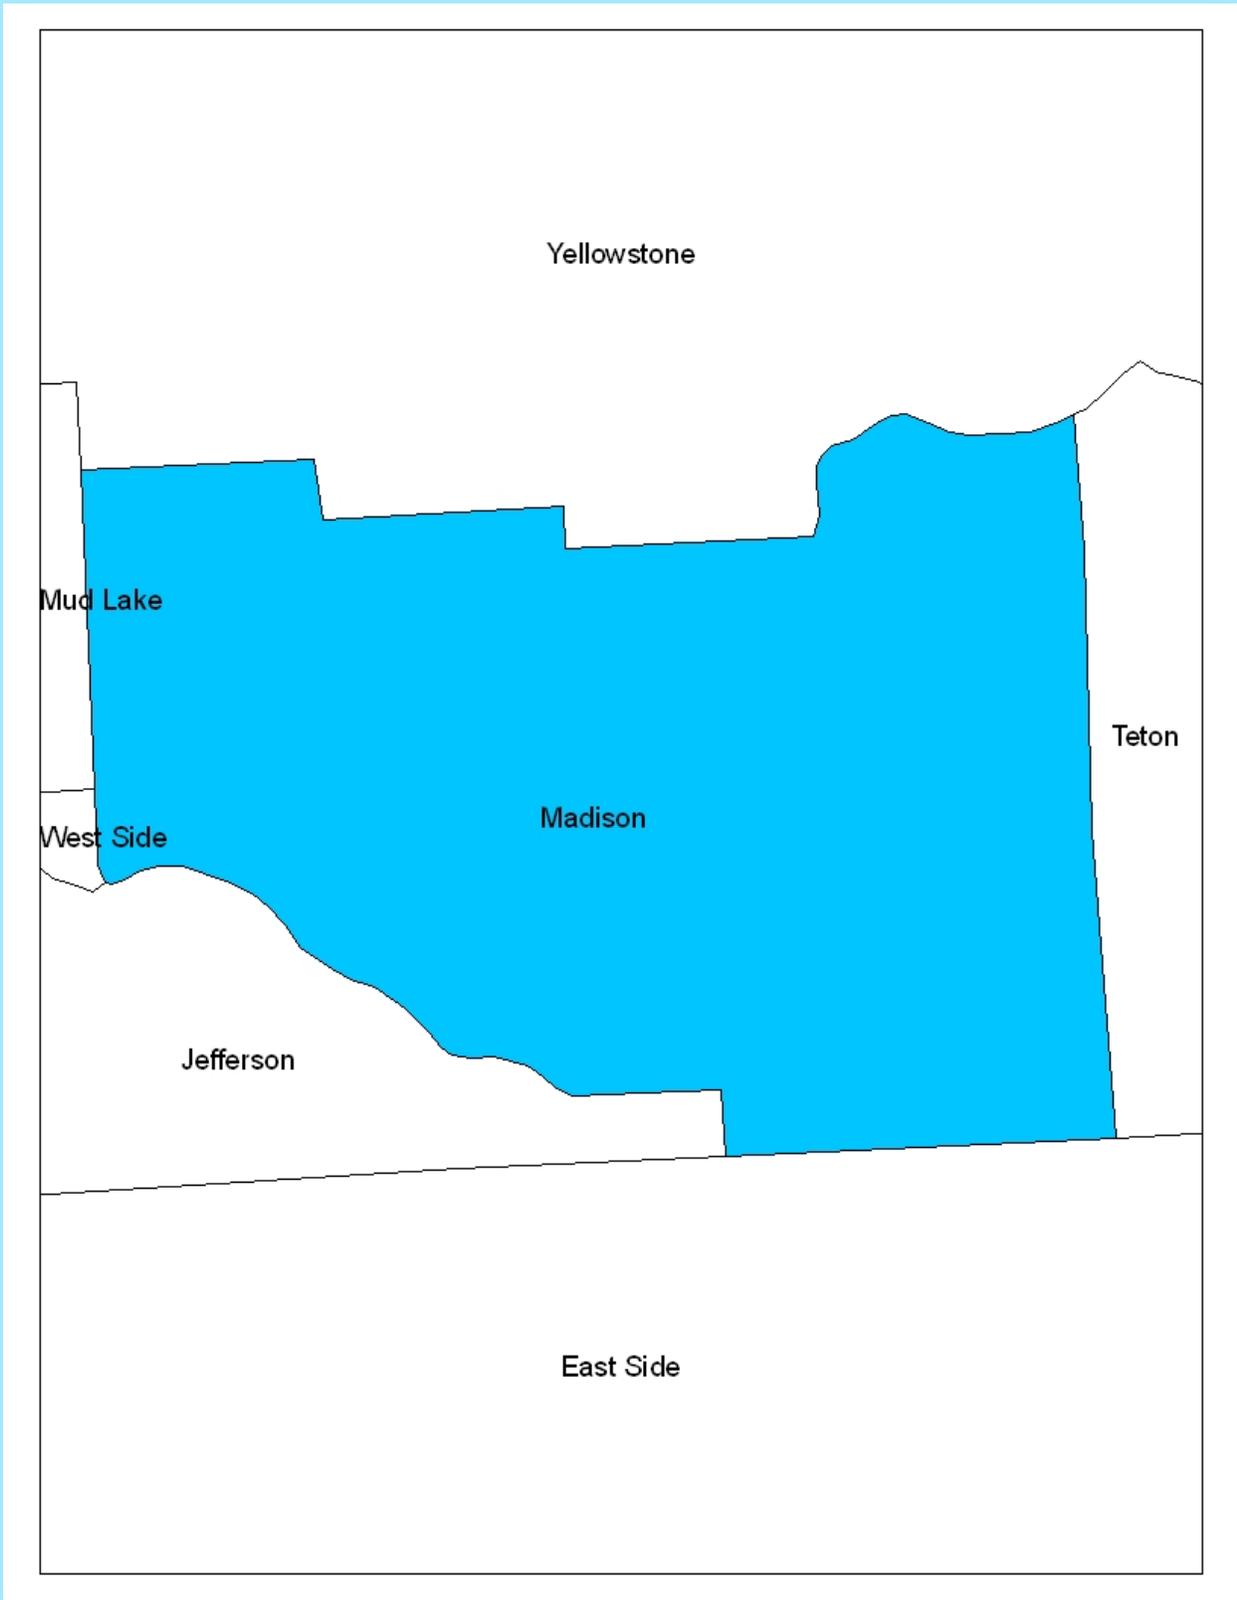

Four major river channels in the Madison SWCD provide habitat for big game and upland game birds. The rivers are the North and South forks of the Snake River, the Teton River, and the Texas Slough. Fishing in the main channels and numerous streams is rated well throughout the SWCD. Sportsmen and landowners sometimes come into conflict over access to the main rivers and other public hunting and fishing areas. The Madison SWCD supports development of adequate access roads to public hunting and fishing facilities. The district also encourages private landowners to develop waterfowl nesting areas and needed food and cover for game birds.

After the Teton Dam collapsed on June 5, 1976, the SWCD assisted in the cleanup by publishing a county-wide plat book. 'Only traces of this tragedy remain today.

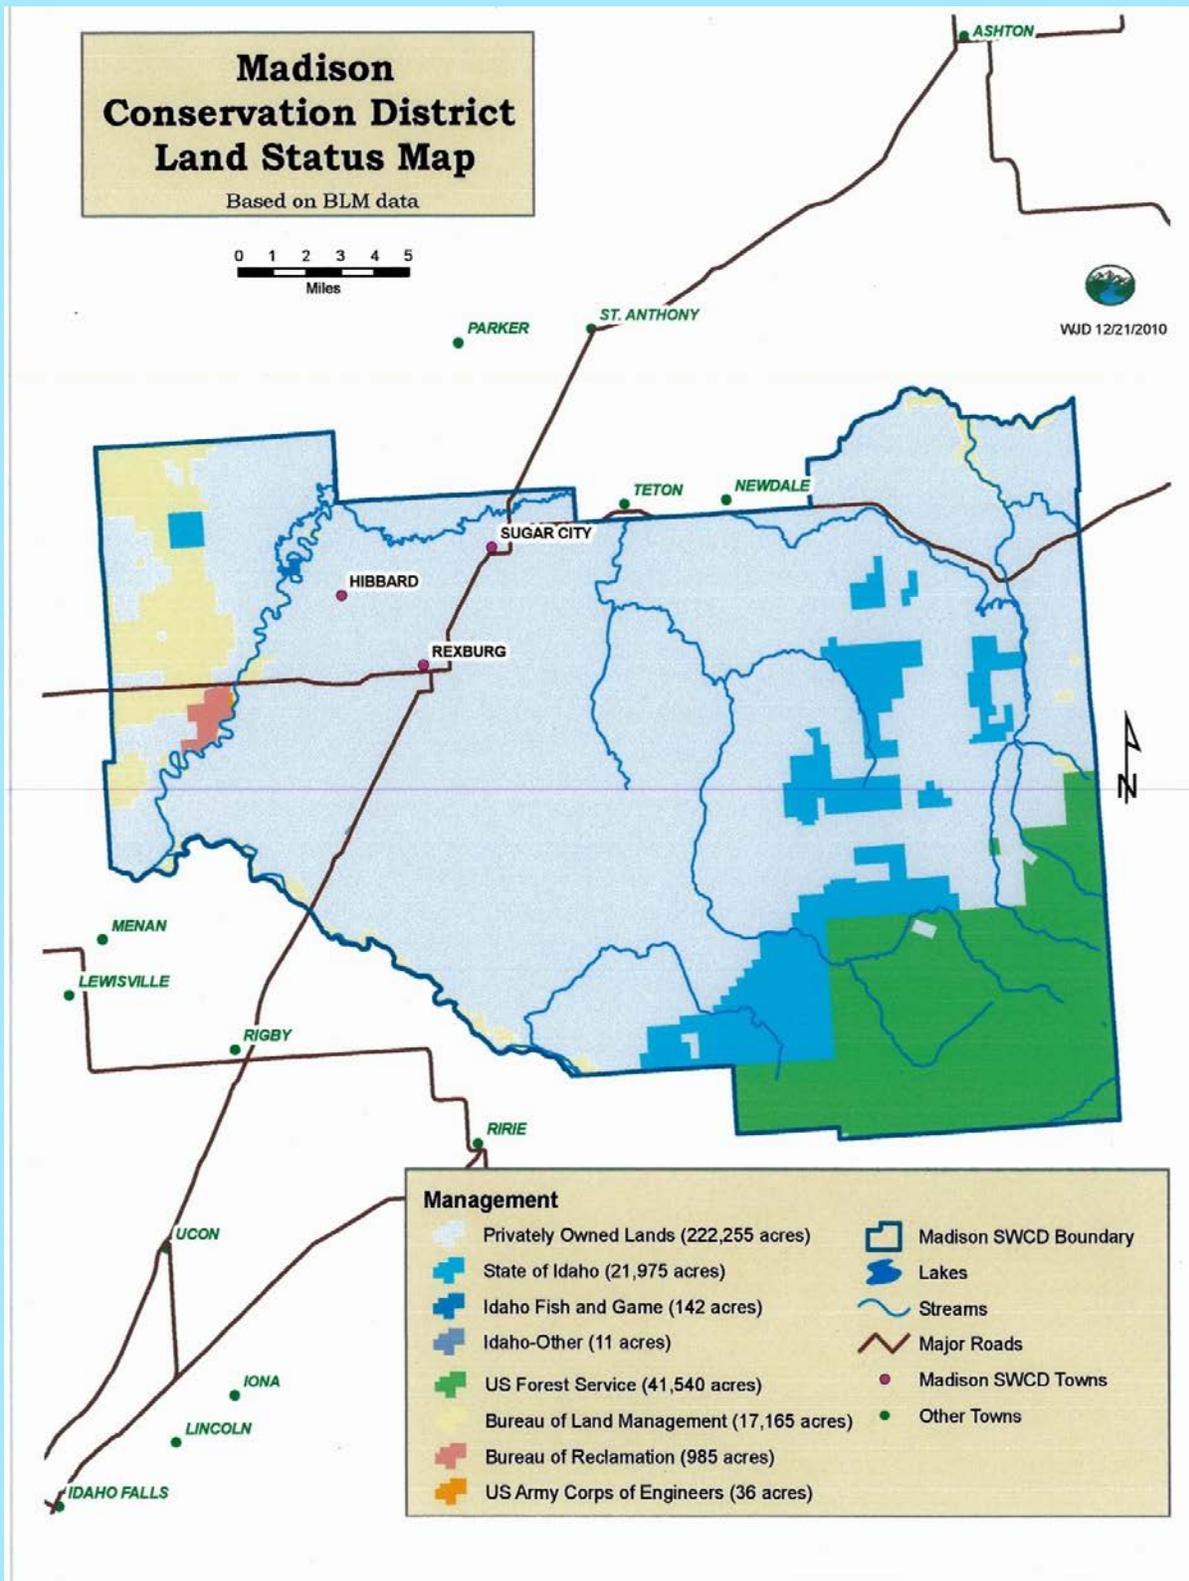

SECTION 1: Physical Characteristics of the District
 (IDAPA.60.05.02.025.01)

SECTION 2: Economic Conditions and Outlook
(IDAPA.60.05.02.025.02)

Population, Labor Force & Employment

Madison County’s population increased 25 percent between 2003 and 2013, primarily because of the 2004 conversion of two-year Ricks College to Brigham Young University-Idaho. The record-breaking enrollment the school had been experiencing has continued, pushing economic growth, especially through construction of student housing and campus expansion. BYU-Idaho plans to further expand its student population through 2015. The county has experienced tremendous growth since 2002, increasing by almost 9,000. Over 40 percent of that occurred between 2003 and 2005. Madison County ranked 11th in the state in population. Over the last decade Madison County was the fourth fastest growing county in the state.

Madison County has maintained one of the lowest unemployment rates in the state. The county has been well below the national and state rates, and the expansion of existing businesses and emergence of new ones has kept its multilingual labor market very tight. Call centers are finding the bilingual skills of computer-trained students enticing. Of the county’s major employers, three are call-center based.

New business parks in Rexburg are also attracting many new and expanding businesses. Trade generates one-fourth of the county’s jobs, strong in both retail and wholesale. Health care and education also play a large role, and the hospital is expanding as the number of clinics countywide increases. The university is still growing and adding more degree programs, fueling an increase in education employment. Full-time students are not counted by the U.S. Bureau of Labor Statistics as part of the civilian labor force. As a result these estimates can understate the actual size of the labor force for small counties with a large university presence. The student population alone in Madison County is over 15,000.

Labor Force	Oct 13	Oct 14

Trends Impacting Conservation in the Madison Soil and Water Conservation District

- Continued reduction in state funding which further reduces the district’s efforts to be effective as in conservation.
- Unfunded mandates as it affects agricultural, natural resource and forest management.
- Endangered Species Act mandates and enforcement.
- Urban development and absentee landowners.
- Recreational use and its impact to agricultural management.

Strategies to Address Trends (IDAPA. 60.05.02.025.03)

- Develop legislative an outreach program to address funding shortfalls from State funds.
- Secure funding to address agricultural mandates and landowner private property rights.
- Implementation of water quality and water quantity projects to improve fish passage and wildlife habitat within the District to help address ESA issues.
- Continue an active information and education program for landowners to address urban development.

Status of the Agricultural Economy and Outlook (IDAPA.60.05.02.025.02)

The right of agriculture to exist and continue to operate is protected by Idaho law. Given the rural nature of the county, local ordinances and resolutions must not conflict with the right to farm protections for agricultural operations in *Idaho Code, Title 22, Agriculture and Horticulture, Chapter 45, Right to Farm*.

High-density residential development defined as more than one home per acre, or conflicting development should be directed away from irrigated agricultural land, taking into consideration the following factors:

1. Potential crop productivity
2. Availability of water
3. Grazing potential
4. Environmental factors
5. Availability of public services
6. Historical land use practices

Lands designated for agricultural use are suitable for all types of agricultural and range operations, as well as single family homes, including manufactured homes, and accessory buildings necessary for agricultural operations.

Existing commercial, industrial, and residential land uses, home-based businesses and occupations and livelihoods are historical uses and will be allowed and will be managed to minimize the impacts on agriculture. Non-agricultural uses that could have adverse impacts on agricultural land use areas must be carefully reviewed.

SECTION 3: Assessment (IDAPA.60.05.02.025.03)

Non-Irrigated Cropland

Primarily winter wheat/fallow (precipitation 10-14 inches), winter wheat/spring barley/fallow (precipitation 12-16 inches) or annual spring barley (precipitation 16-22 inches) on silt loams with slopes 0-16%. Non-irrigated cropland is often characterized by significant ephemeral gully and concentrated flow erosion as well as sheet and rill erosion. Conventional tillage results in less than 10% residue after planting. Application of nutrients and pesticides typically does not meet Idaho NRCS standards.

Surface Irrigated Cropland

Conventionally tilled, often intensively cultivated border irrigated cropland on 0-1% slopes. Precipitation is 12 inches or less. Soils are typically sandy loams, silt loams, and loams, and may have been extensively land-leveled in the past. Typical rotations small grains and alfalfa, although annual grain is also common. Nutrient, pest, and/or irrigation water management may be less than desirable. Impacted surface and/or ground water quality is common.

Sprinkler Irrigated Cropland

Conventionally tilled cropland on soils ranging from sands to loams. Rotations containing less than 66% high residue crops can lead to wind erosion problems. Wind erosion is typically a problem from March to June, creating air quality and visibility hazards in some portions of the sub basin. Various combinations of small grains, alfalfa, beets, potatoes, and barley are grown. Potatoes with one or two years of spring grain is a typical rotation on slopes ranging from 0-8%. These rotations may have sheet and rill and ephemeral gully erosion problems in the spring following potatoes. Sprinkler-irrigation induced erosion may also be a concern, especially on steeper slopes. Nutrient and pest management may be less than desirable. Irrigation water management and maintenance of sprinkler systems may be less than desirable. Wildlife habitat is often inadequate with limited permanent cover.

Hayland

Conventionally tilled, surface and sprinkler irrigated on 0-7% slopes. Precipitation is 20 inches or less per year with a growing season ranging from 80 to 160 days. Irrigation water is normally plentiful though ground water quantity is a concern in some areas. Small grains and alfalfa are grown in rotation, with alfalfa typically maintained for 4-6 years. Grazing of crop aftermath may occur. Nutrient, pest or irrigation water management may be less than desirable. Non-irrigated upland hay consists of introduced perennial grasses and legumes. One cutting is common. Renovations occur every 6-10 years. Soils vary from loams to silt loams with slopes ranging from three to 30 percent. Precipitation is 16 inches or greater. Soil testing and fertility management is typically lacking. Grazing of crop aftermath is common.

Pasture

Some improved non-irrigated land pasture with introduced forage species including wheat grasses, fescues, bromes, orchard grass, sanfoin, clover and alfalfa. The older established stands are of low vigor, with encroachment of noxious weeds. Continuous season-long grazing is typical, with below-optimum forage production. No commercial fertilizers are applied, and pest management

SECTION 3: Assessment (IDAPA.60.05.02.025.03)

practices are limited. Livestock water may be inadequate or poorly managed. Irrigated pastureland includes both low elevation pastures and high elevation mountain valleys. Irrigated pastures are sprinkler or surface irrigated on variable soils with slopes 1-5%. Irrigation water is distributed via earthen ditches, with tail water eventually returning to rivers or streams. Fields may have been leveled. Surface irrigation efficiency is 20-35%. Plants are introduced forage species and native perennials, conventionally tilled when rotating pasture (10 years) and grain (2 years). Commercial fertilizers and/or animal waste are sometimes applied, but without soil testing or nutrient management. Adjacent riparian areas are important for wildlife. Non-irrigated riparian pastures of native grass, sedge and rush species mixed with introduced timothy, smooth brome grass, creeping meadow foxtail, orchard grass and clover forage species are typically utilized by livestock from early spring through fall. Wildlife use these areas throughout the year. Annual precipitation is 20 inches or less. Soils are variable in texture on slopes of 0 to 2 percent. Nutrients are occasionally applied.

Rangeland

Mid elevation desert to high elevation, steep rangeland. Mid-elevation rangeland has precipitation ranging from 12-16 inches. This range consists of sagebrush, perennial bunchgrasses and forbs with variable soils on nearly level flats to benches and rolling hills. Frequent fires have eliminated some areas of sagebrush, with annual invaders dominant. Carrying capacity can be limited by available water. High elevation range has precipitation greater than 16 inches, on steep slopes and high mountain valleys. Land is utilized by antelope, deer, elk and livestock in winter and early spring. Areas are important sage grouse habitat. Riparian grazing units typically exhibit impacts to riparian vegetation and a loss of woody species. Riparian vegetation consists of grasses, sedges, rushes and a variety of woody species. These areas are important habitat for a variety of fish and wildlife. Soils vary from gravelly to loamy. Elevation and precipitation vary widely throughout the area. Access to riparian areas on all rangeland types is not typically managed, and temperature, nutrients, and sediment may be an associated water quality concern.

Headquarters

Livestock operations (AFO/CAFO), including winter feeding areas, that may or may not be adjacent to surface waters. Annual precipitation ranges from 8-25 inches and falls primarily from November to March. Soils vary from deep to shallow clays, silts, and sandy loams that are poor to excessively drained. Animal waste is typically applied to cropland or pasture and suitable acreage may be limited. There is a high risk to surface water and/or ground water due to inadequate or incomplete waste management systems and livestock operations and related structures built adjacent to waterways or in floodplains. Livestock often have direct access to waterways resulting in water quality, stream bank, and aquatic habitat concerns. Pesticides are often used without a management plan. Odor concerns may affect adjacent landowners.

The Madison Soil and Water Conservation District have actively promoted resource conservation practices within the sub basin. Conservation practices that can be used to address these water quality issues include erosion control, grazing management, irrigation water management, nutrient and pest management, residue management, conservation cover, stream bank enhancement/restoration, and riparian buffers, cropland and slight increase in non-cultivated cropland acres, along with improved erosion control.

SECTION 3: Assessment
(IDAPA.60.05.02.025.03)

Erosion

Sheet and rill erosion by water on the sub basin croplands, pasturelands and CRP have decreased since 1982. Water erosion rates have ranged from a high of about 3.9 tons per acre per year in 1982 to about 2.9 tons per acres per year in 1997. A slight decrease in acres of cultivated methods probably contributed to the decrease in water erosion over the 15 year period. Wind erosion rates on the sub basin croplands, pasturelands and CRP have fluctuated from about 2.5 tons per acre per year in 1982 to about 3.4 tons per acre per year in 1992 and then decreased to about 2.6 tons per acre per year in 1997.

SECTION 3: Assessment
(IDAPA.60.05.02.025.03)

District Staffing Requirements/ Needs (IDAPA.60.05.02.025.03)

- ✦ Full-time Conservation District Administrative Assistant with benefits
- ✦ Half Time Information and Education Staff with benefits

Technical Assistance (IDAPA.60.05.02.025.03)

- ✦ In partnership with the Natural Resource Conservation Service (NRCS), the District is able to utilize Engineer, Range and Soil technical assistance. The Idaho Soil and Water Conservation Commission (ISWCC) supports the District with a Water Quality Specialist. The Madison SWCD will seek and accept appropriate and legitimate technical assistance outside the NRCS and ISWCC when or if required.

SECTION 4: Identify and Prioritize Objectives (IDAPA.60.05.02.025.03)

Natural Resource Priorities and Goals that address Resource conditions and Conservation needs:

1. Soil Quality (Rangeland, Irrigated & Non-Irrigated Cropland, Pasture & Hayland)

- Actively support NRCS in their goal to implement Resource Management Systems through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- Use all available USDA Farm Programs to meet Soil Quality goals.
- Advise and provide technical support to producers to utilize Cover Crops to reduce Soil erosion through local working groups, information meetings, newsletters, tours and cost share programs and grants.

2. Water Quality and Water Resources

- To identify and develop priorities for water quality on limited streams by working with DEQ and BAG's through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- Aggressively plan and implement projects to improve water quality in county streams through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- The Madison SWCD will provide technical assistance to landowners and operators to meet the Idaho Water Quality Law and Federal Clean Water Act regulations.
- Improve irrigation water management by working with local Canal districts and local landowners.
- Address new water development issues such as urban subdivision developments by working with City and County Planning and Zoning departments.
- Promote conservation from flood irrigating to pivot systems for saving ground and surface water by working with the NRCS and local producers through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- Assist Canal Districts and producers with irrigation systems and recharge awareness.

3. Vegetative Management (Rangeland, Irrigated & Non-Irrigated Cropland, Pasture & Hayland)

- Supervisor participation in Coordinated Weed Management groups.
- Promote coordinated Weed Management area goals with cooperators and urban residents through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- Advertise, promote, monitor and provide technical assistance for conservation windbreaks through the Districts annual Conservation Tree Sale.

4. Riparian / Wetlands (Fish/Wildlife and Water Quality)

- Create and promote an awareness of the value of riparian and wetland areas through local working groups, information meetings, newsletters, tours and cost share programs and grants.
- Determine and work with landowners who are interested in participating in applicable projects.
- Promote riparian conservation improvements through EQIP and other cost share programs.

5. Fish and Wildlife

- Promote and utilize EQIP, CRP, WHIP and WRP with eligible cooperators for habitat improvements.
- Continue the efforts to improve fish and wildlife habitats by promoting applicable programs and awareness through local working groups, information meetings, newsletters, tours and cost share programs and grants.

SECTION 4: Identify and Prioritize Objectives (IDAPA.60.05.02.025.03)

Information and Education Priorities and Goals:

- ✱ By 2018 work with the County School District to provide all 5th and 6th grade students with the opportunity to participate in the annual conservation poster contest.
- ✱ By 2018 work with the County School District to provide all High School students the opportunity to participate in the annual conservation speech contest.
- ✱ Continue to seek and sponsor interested students to attend the annual Natural Resource Camp.
- ✱ Continue to publish informative newsletters to not only educate but promote conservation programs and practices.
- ✱ Continue to conduct tours, meetings and workshops to educate, promote and gain insight on conservation practices and concerns.
- ✱ Participate in legislative displays to educate and promote Natural Resource conservation to our legislative leaders.

District Operations Priorities, Goals:

- ✱ The Madison SWCD will continue to be the primary entity in Madison County to provide assistance to private landowners and land users in the conservation, sustainment, improvement and enhancement of Idaho's natural resources as stated in State Statute 22-2716.
- ✱ Ensure that new supervisors will have completed New Supervisor Training.
- ✱ In cooperation with the IASCD, ISWCC and Conservation Districts, develop and carry out an effective legislative outreach program to ensure 100 per cent State matching funds for all Districts.
- ✱ Invite and include legislative leaders (County, State and Federal) whenever possible, to tours and working groups to gain support and recognition for conservation practices and programs.
- ✱ Continue to lead and or participate in local workshops, meetings and seminars to address conservation programs and practices as well as the control of noxious Weeds.

SECTION 5: Water Quality Component
(IDAPA.60.05.02.025.03)

Teton River Subbasin

Hydrologic Unit Code	17040204
Size	1,133 square miles (725,120 acres)
§303(d) Listed Stream Segments	Badger Creek, Darby Creek, Fox Creek, Horseshoe Creek, Moody Creek, North Leigh Creek, Packsaddle Creek, South Leigh Creek, Spring Creek, Teton River (headwaters to Bitch Creek), North Fork Teton River
Beneficial Uses Affected	Cold water aquatic life, salmonid spawning
Pollutants of Concern	Sediment, nutrients, temperature, flow alteration, habitat modification
Major Land Uses	Agriculture, recreation
Date Approved by U.S. EPA	February 2003
Date Supplement Approved by U.S. EPA	September 2003

Overview

The Teton Subbasin is one of three watersheds that comprise the Henry's Fork Basin. The Teton River drains an area of 806 square miles in Idaho and 327 square miles in Wyoming. The river originates from headwater streams in the Teton, Big Hole, and Snake River mountain ranges and flows more than 64 miles to the point at which it discharges to the Henry's Fork River.

Teton Canyon contains the river for approximately 17 miles. In 1975, Teton Dam was completed at the lower end of the canyon to create a reservoir for irrigation water. In June 1976, when the reservoir behind the dam had almost filled, the earthen dam collapsed. More than 250,000 acre-feet of water and four million cubic yards of embankment material flowed through the breach in less than six hours.

**SECTION 5: Water Quality Component
(IDAPA.60.05.02.025.03)**

The portion of the river below the dam was extensively altered by the flood and by the mitigation and restoration work that followed. However, the quality of water in the Teton Subbasin is generally good. Of the 13 segments (11 streams/ivers) in the subbasin on Idaho's 1998 §303(d) list, sediment is cited as the pollutant responsible for the impairment of nine. Agriculture is the main contributor of sediment. The other pollutants shown on the 1998 §303(d) list are also associated primarily with agriculture.

Sediment TMDLs were developed for eight water bodies and nutrient TMDLs for two in the original TMDL. Temperature TMDLs for Fox and Spring Creeks and a nutrient TMDL for Moody Creek were developed in the TMDL supplement. Sediment allocations for North Leigh Creek were included in the Spring Creek sediment TMDL.

Darby, Fox, Horseshoe, Packsaddle, and Spring Creeks are listed for flow alteration, and the Teton River is listed for habitat alteration. However, the U.S. Environmental Protection Agency does not believe that flow and habitat alteration are pollutants as defined by the Clean Water Act. Since TMDLs are not required for water bodies impaired by pollution but not pollutants, TMDLs were not developed for flow or habitat alteration.

Streams and Pollutants for Which TMDLs Were Developed

Original TMDL

Badger Creek	Sediment
Darby Creek	Sediment
Fox Creek	Sediment
Packsaddle Creek	Sediment
S. Leigh Creek	Sediment
Spring Creek	Sediment
Teton River	Sediment, nutrients (total phosphorus)
N. Fork Teton River	Sediment, nutrients (total phosphorus and nitrate)

Supplement

Fox Creek	Temperature
Moody Creek	Nutrients (total phosphorus and nitrogen)
Spring Creek	Temperature

SECTION 6: Identify and Prioritize Projects (IDAPA.60.05.02.025.03)

The Madison SWCD has identified projects and programs for State and County funding as follows:

- Maintain staff hours to conduct and implement District business and objectives.
- Conduct workshops and tours and provide publications on Water quality and quantity improvement projects, Crop and Hay land improvement projects and Wildlife Initiative projects.
- Organize and conduct Awareness workshops when needed.
- Conduct an annual Tree, Shrub and Weed barrier sale to promote Conservation Wind Breaks that prevent soil and water erosion as well the spread of noxious Weeds.
- Sponsor a Poster contest for County 5th and or 6th Graders.
- Sponsor a Speech contest for County High School students.
- Operate the District equipment program (District owns and rents a Weed fabric layer and Tree planter).
- Support the State Lands judging contest.
- Support the State Forestry contest.
- Support and contribute to the High Country RC&D Cloud Seeding program.
- Support and actively participate in the control of Noxious Weeds.
- Provide the community with leadership and support for the conservation of natural resources.
- Support of the IASCD, RC&D and IDEA.
- Sponsor local school's Conservation field trips to promote the conservation of our natural resources.
- The Madison SWCD will also continue to sponsor the Conservation Farmer of the Year which is an award that recognizes the conservation our natural resources by a county producer that is above and beyond normal practices.

The above projects and activities are ranked in a priority order however the Madison SWCD believes they have secured adequate funding to provide both staff and sponsorship of these activities for the next fiscal year.

Implementations of these projects and activities are scheduled to take place through the fiscal year, starting July 1st, 2015 and have secured funding. The Madison SWCD Board of Supervisors and Administrative Staff will oversee the implementation of this work with the assistance from the NRCS, RC&D and Madison County.

Key Conservation Decision Makers

- ✚ The Citizens within the Madison Soil and Water Conservation District
- ✚ County Commissioners;
 - Kimber Ricks, Commission Chairman
 - Jon Weber, Commissioner
 - Todd Smith, Commissioner
- ✚ County Planning and Zoning Administrator and Coordinator;
 - Brent McFadden, Administrator
- ✚ Mayor of Rexburg;
 - Richard Woodland
- ✚ Mayor of Sugar City;
 - LaMont Merrill
- ✚ State legislators representing the Conservation District, Legislative District #34;
 - State Senator, Brent Hill
 - House Seat A, Representative, Ronald Nate
 - House Seat B, Representative, Dell Raybould
- ✚ U.S. Senators and Representative;
 - U.S. Senator, Michael Crapo
 - U.S. Senator, James Risch
 - U.S. Representative, Michael Simpson
- ✚ Conservation District Supervisors;
 - Greg Blaser, Chairman
 - Joe Jeppesen, Vice-Chairman
 - Susan Hymas, Treasurer
 - Rod Robison, Member
 - Charles Ricks, Member
- ✚ Technical Expertise Groups;
 - NRCS
 - NRCS Soils Office
 - U.S. Bureau of Land Management
 - U.S. Forest Service
 - U.S. Fish and Wildlife Service
 - Idaho Department of Environmental Quality
 - Idaho Department of Agriculture
 - Madison County Weed Department
 - High Country RC&D
 - University of Idaho Extension Office
 - Henry's Fork Foundation
 - Upper Snake River Coordinated Weed Management Area
 - Local Canal Companies

Madison Soil and Water Conservation District Annual Work Plan

FY-2016 (7/1/15 – 6/30/16) Annual Plan of Work Madison Soil & Water Conservation District

For Information Contact: Chairman Greg Blaser

Telephone Number (208) 356-5701 ext. 101

Email: Robbie.Taylor@id.nacdnet.net

Counties Served: Madison

Legislative District: 34

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Mission of the Madison Soil & Water Conservation District

To take available Technical, Financial and Educational resources, whatever their source, and focus or coordinate them so that they meet the needs of the local land user for conservation of Soil, Water and related resources. Also, to protect and improve the natural resources in Madison County for landowners to use for generations to come.

Trends Impacting Conservation in the Madison Conservation District

Urban sprawl.
Noxious weeds.
Water quality/rights issues.

Projects Planned, Coordinated or Managed

Work with local, State and Federal organizations to improve Conservation and the quality of lands within Madison County.
Work on informing the community of noxious weeds and how to control and prevent them.
Develop and promote Erosion control projects.
Work on obtaining 319 grants when needed.

Funding Sources for District Operations and Projects Coordinated

Madison County: \$6,000
State of Idaho: \$12,000
Conservation tree sale program: \$13,000.00

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 1: Soil Quality

Objective: To develop and implement Resource Management Systems.

Goal(s): To reduce non-point source pollution on irrigated & dry cropland.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Support NRCS in their goal to implement Resource Management Systems for the improvement of Soil quality.	Ongoing	Board
Use all available USDA Farm Programs to meet goal.	Ongoing	Board
Advise producers to utilize Cover Crops to reduce Soil erosion.	Ongoing	Board
Conduct Local Working Groups and Tours to promote Cover Crops for both county and area land owners and producers.	Ongoing	Board

Objective: Improve irrigation water management.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Seek financial and technical assistance from the Farm Bill in cooperation with Locally Lead Conservation Groups to improve Soil quality.	Ongoing	Board / LWG
Conduct annual tour to demonstrate irrigation and water management practices that improve Soil quality.	Ongoing	Board

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 2: Water Quality and Water Resources

Objective: To identify and develop priorities for water quality limited streams.

Goal(s): Madison SWCD will provide technical assistance to landowners and operators to meet the Idaho Water Quality Law and Federal Clean Water Act regulations.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Provide technical & financial assistance to Moody Creek & North Fork of the Teton river for landowners for Nutrient contamination.	Ongoing	Board
Continue to be aware of problem areas on Moody Creek. The Sub basin assessment on Moody Creek is complete.	Ongoing	Board
Work with producers on AFO/CAFO issues regarding water quality of area streams.	Ongoing	Board / NRCS

Objective: Determine District's priorities on 303(d) listed streams.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Participate in Henry's Fork Watershed Council area group.	Ongoing	Board
Provide guidance on agriculture and grazing BMP's	Ongoing	Board / NRCS
Provide seed funding and technical assistance to treat 303(d) listed streams.	Ongoing	Board / NRCS
Establish a public outreach program to inform the community of water quality issues through newsletters, and public meetings.	Ongoing	Board / Admin Asst

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 2: Water Quality and Water Resources (continued)

Objective: Improve irrigation water management

Goal(s): Address agriculture and irrigation water management

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
SWCD will address new water development issues such as urban subdivision developments.	Ongoing	Board
SWCD will participate in: water rights meetings & decisions, salmon issues, adjudication, aquifer recharge, and setting TMDL's.	Ongoing	Board
Promote Variable Frequency Drives to producers to preserve Water and Energy.	Ongoing	Board / NRCS
Promote conversion from flood irrigating to sprinklers for savings of ground and surface water.	Ongoing	Board / NRCS
Assist Canal Districts and with Irrigation Systems and Recharge awareness.	Ongoing	Board / Canal Districts

Objective: Monitor conditions to determine needs of water users

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Be involved in development of supplemental sources of water through cloud seeding.	Ongoing	Board / RC&D
Be informed about Endangered Species Act and how it will impact Madison SWCD, cooperators and potential cooperators (Urban).	Ongoing	Board / NRCS
Pursue opportunities for producers to convert to a variable speed pump from a regular pump for water conservation.	Ongoing	Board / NRCS

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 7/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 3: Vegetative Management

Objective: Actively participate in Upper Snake Coordinated Weed Management Area.

Goal(s): Control the spread of noxious weeds in Madison County and improve vegetative cover for erosion control.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Supervisor participation in Coordinated Weed Management group.	Ongoing	Board
Promote coordinated weed management area's goals with cooperators and urban residents.	Ongoing	Board / NRCS
Promote RC&D measures.	Ongoing	Board

Objective: Conduct tree sale program for conservation.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Advertise, promote, monitor and provide conservation windbreaks.	Annually	Admin Asst
Provide technical assistance for proper installation and maintenance of conservation windbreaks.	Annually	Board / NRCS
Monitor the effectiveness of conservation windbreaks.	Annually	Board / NRCS
Continue promoting windbreaks with demonstration projects.	Annually	Board / NRCS

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 4: Riparian / Wetlands

Objective: Request an assessment from NRCS and ISWCC on prioritized zones.

Goal(s): Assure & maintain the integrity and quality of riparian and wetland zones.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Create and promote an awareness of the value of riparian and wetland areas.	Ongoing	Board / NRCS
Determine and work with landowners who are interested in participating in projects.	Ongoing	Board / NRCS
Seek financial and technical assistance for Madison County landowners.	Ongoing	Board / NRCS
Promote riparian conservation improvements through EQIP and other cost share programs.	Ongoing	Board / NRCS

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Priority Area Number 5: Fish & Wildlife

Objective: Utilization of CRP, EQIP, & WHIP with cooperators for habitat improvement.

Goal(s): Continuation of efforts to improve fish & wildlife habitat.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Promote EQIP, CRP, WHIP, and WRP with potential participants as a means to increase and improve Conservation of our Natural Resources.	Ongoing	Board / NRCS

Objective: Predator control to sustain and increase populations of upland game birds.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Evaluate the needs and methods for predator control of coyotes and fox.	Ongoing	Board
Seek opportunities to enhance sage grouse populations to prevent Endangered Species listing.	Ongoing	Board / Cooperating agencies

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Additional Priority Areas: Animal Waste Management

Objective: To assist AFO/CAFO operators with animal waste management systems.

Goal(s): Identify and develop management systems to address animal waste as related to surface and ground water quality.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Assist landowners in complying with AFO/CAFO regulations.	Ongoing	Board

Board = Greg Blaser, Joe Jeppesen, Susan Hymas, Rod Robison and Charles Ricks

Madison Soil & Water Conservation District assisting landowners and operators with their conservation choices

FY-2016 (7/1/15 – 6/30/16) Annual Work Plan Madison Soil & Water Conservation District

Additional Priority Areas: Information / Education

Objective: To promote locating personal dwellings within County Planning & Zoning impact zone.

Goal(s): Foster an awareness of the need to protect farm land and open spaces.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Continue District Supervisor membership on Madison County Planning & Zoning Board.	Ongoing	Board
Provide resource information to Planning & Zoning Board. Work closely with the Planning & Zoning Board to become aware of new Housing sub-divisions.	Ongoing	Board
Advocate the protection of prime farm land.	Ongoing	Board

Objective: Continue to educate the public in Natural Resource Issues.

Action(s): Below

Actions for FY2016	Target Dates	Person(s) Responsible
Continued support of youth educational opportunities.	Ongoing	Board / Admin Asst
Continue with newsletters semi-annually.	Ongoing	Board / Admin Asst
Promote good relations with legislators by keeping them informed on events happening with the District, and attending legislative displays.	Ongoing	Board / Admin Asst
Promote good relations with news media.	Ongoing	Board / Admin Asst
The board sponsors a weed information seminar for Madison County residents.	Ongoing	Board/ Admin Asst
